

OpenTURNS cheat sheet

This *OpenTURNS* v1.17 cheat sheet provides a quick overview of all the programming interface. For full documentation, please read the doc. A beginner may be interested in the Quick start guides.

This cheat sheet follows the steps of the ABC method.

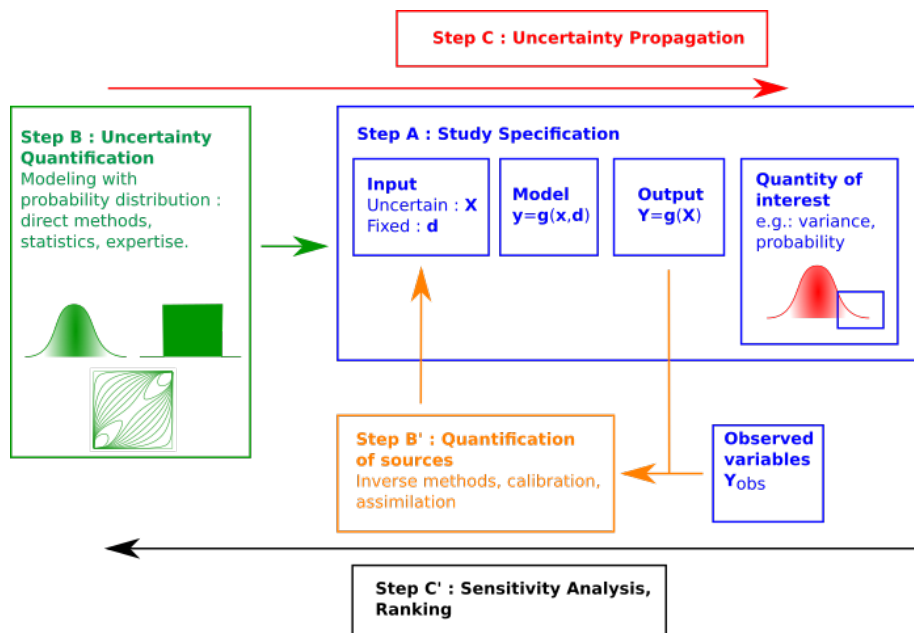

Figure 1: The ABC method

Step A : define the study

Purpose	Class / Method
Import <i>OpenTURNS</i>	<code>import openturns as ot</code>
Vector	<code>ot.Point(dimension)</code>
Sample	<code>ot.Sample(size, dimension)</code>
Symbolic function	<code>ot.SymbolicFunction(["x0", "x1"], ["1 + x0 + x1"])</code>
Python function	<code>ot.PythonFunction(number_of_inputs, number_of_outputs, g)</code>
Manage history and cache	<code>ot.MemoizeFunction(myfunction)</code>

Purpose	Class / Method
Normal	<code>ot.Normal(mu, sigma)</code>
Uniform	<code>ot.Uniform(a, b)</code>
Multivariate distribution with independent copula	<code>ot.ComposedDistribution((X0, X1, X2))</code>
Input random vector	<code>ot.RandomVector(inputDistribution)</code>
Output random vector	<code>ot.CompositeRandomVector(g, inputRandomVector)</code>
Generate observations	<code>randomVector.getSample(sample_size)</code>
Get sample size	<code>sample.getSize()</code>
Get sample dimension	<code>sample.getDimension()</code>
Compute sample mean	<code>outputSample.computeMean()</code>
Compute sample standard deviation	<code>outputSample.computeStandardDeviation()</code>

Step B : quantification of the sources of uncertainties

Purpose	Class / Method
Import <i>OpenTURNS</i>	<code>import openturns as ot</code>
Fit a Normal	<code>ot.NormalFactory().build(sample)</code>
Fit a Beta	<code>ot.BetaFactory().build(sample)</code>
Fit an histogram	<code>ot.HistogramFactory().build(sample)</code>
Fit a kernel density estimator	<code>ot.KernelSmoothing().build(sample)</code>
Draw QQ-plot	<code>ot.VisualTest.DrawQQplot(sample, distribution)</code>
Kolmogorov-Smirnov test (known parameters)	<code>ot.FittingTest.Kolmogorov(sample, distribution)</code>
Kolmogorov-Smirnov test (unknown parameters)	<code>ot.FittingTest.Lilliefors(sample, factory)</code>
BIC criteria	<code>ot.FittingTest.BIC(sample, distribution)</code>

Step C : push forward the uncertainties

Purpose	Class / Method
Taylor expansion	<code>ot.TaylorExpansionMoments(output_random_vector)</code>
Estimate mean	<code>ot.ExpectationSimulationAlgorithm(output_random_vector)</code>
Estimate $P(Y > s)$	<code>sample.computeEmpiricalCDF(s, True)</code>
Create the event ($Y > s$)	<code>ot.ThresholdEvent(output_random_vector, ot.Greater(), s)</code>
Create a Monte-Carlo experiment	<code>ot.MonteCarloExperiment()</code>

Purpose	Class / Method
Estimate a probability	<code>ot.ProbabilitySimulationAlgorithm(myEvent, experiment)</code>

Step C' : sensitivity analysis

Purpose	Class / Method
Perform linear regression	<code>ot.LinearLeastSquares(sampleX, sampleY)</code>
Standardized regression coefficients	<code>ot.CorrelationAnalysis_SignedSRC(sampleX, sampleY)</code>
Draw indices	<code>ot.SobolIndicesAlgorithm.DrawCorrelationCoefficients(SRCinput_names, "SRC coefficients")</code>
Estimate Sobol' indices with given n	<code>ot.SobolIndicesExperiment(X, size)</code>
Estimate Sobol' indices	<code>estimator = ot.SaltelliSensitivityAlgorithm()</code>

Step B' : calibration

Purpose	Class / Method
Create the parametric model	<code>ot.ParametricFunction(g, calibratedIndices, thetaPrior)</code>
Linear least squares	<code>ot.LinearLeastSquaresCalibration(parametric_g, input_sample, output_sample, thetaPrior, "SVD")</code>
Non linear least squares	<code>ot.NonLinearLeastSquaresCalibration(parametric_g, input_sample, output_sample, thetaPrior)</code>
Linear gaussian	<code>ot.GaussianLinearCalibration(parametric_g, input_sample, output_sample, thetaPrior, theta_sigma, output_covariance)</code>
Non linear gaussian	<code>ot.GaussianNonLinearCalibration(parametric_g, input_sample, output_sample, thetaPrior, theta_sigma, output_covariance)</code>
Bayesian calibration	<code>ot.RandomWalkMetropolisHastings(prior, conditional, model, x_obs, y_obs, initialState, proposal)</code>

Metamodel

Purpose	Class / Method
TODO	TODO

Design of experiments

Purpose	Class / Method
TODO	TODO
